Dinesh Venkata Gadiraju

Denton, TX | 940-334-6257 | dineshvenkatagadiraju@gmail.com | LinkedIn | GitHub | Open to Relocation

PROFILE SUMMARY

Master of Science graduate in Computer Science from the University of North Texas with hands-on software engineering experience at Fint Solutions building scalable backend and full-stack applications. Proficient in Go (Gin), Java, Python, React, Next.js, TypeScript, PostgreSQL, Redis, Docker, AWS, and RESTful API development. Experienced in designing microservices, JWT authentication, AI-powered applications, LLM integration, cloud deployment, CI/CD pipelines, and distributed systems. Built an AI-driven Career Copilot platform featuring resume analysis, job tracking, AI recommendations, secure authentication, and production-ready backend architecture. Passionate about backend engineering, cloud infrastructure, applied AI, and building scalable software used in real-world environments.

EDUCATION

University of North Texas | *Denton, TX May 2026*
Master of Science, Computer Science — *GPA: 3.56*

BVRIT – Narsapur | *Hyderabad, India May 2024*
Bachelor of Science, Computer Science — *GPA: 8.3 / 10*

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | Fint Solutions | *Hyderabad, India* | *Oct 2023 – May 2024*

- Monitored and managed Jira queues by triaging 20+ tickets per sprint, updating issue status, assigning work items, and coordinating with developers to improve issue resolution time by 25%.
- Developed and enhanced 10+ full-stack web application features using Python, Django, React.js, REST APIs, and PostgreSQL, contributing to stable releases for internal users.
- Built and integrated 10+ RESTful API endpoints using Django REST Framework, performed API testing with Postman, and reduced integration defects by 20%.
- Designed and optimized PostgreSQL database schemas, wrote efficient SQL queries, and improved backend response times by approximately 15% through query optimization.
- Participated in Agile/Scrum ceremonies, collaborated with a team of engineers, completed sprint tasks on schedule, and maintained technical documentation following SDLC best practices.

Student Assistant – Technical Support | University of North Texas | *Denton, TX* | *Sep 2024 – May 2026*

- Provided technical support across 40+ lab workstations, diagnosing and resolving hardware, software, and network issues to maintain high availability for 500+ daily users.
- Streamlined user onboarding by creating clear technical documentation covering campus Wi-Fi setup, software configurations, and UNT system authentication workflows.
- Managed equipment inventory and coordinated hardware check-outs, reducing asset tracking errors through systematic logging and routine maintenance audits.

PROJECTS

Career Copilot – AI-Powered Career Assistant | 2026

GitHub: https://github.com/dineshgadiraju/Career-Copilot

• Built a production-ready AI-powered Career Copilot platform using Go (Gin), React, Next.js, TypeScript, PostgreSQL, Redis, Docker, and Tailwind CSS following a scalable full-stack architecture.

• Developed secure backend services including JWT authentication, password hashing (bcrypt), user management, application tracking, resume analysis, and AI-powered career recommendation APIs.

• Integrated Large Language Models (OpenAI API) to provide resume feedback, career guidance, job recommendation workflows, and AI-assisted application support using prompt engineering.

• Designed PostgreSQL database schema and optimized backend APIs while implementing Redis caching, Docker containers, and modular microservices for scalability.

• Implemented modern development workflows using Git, GitHub, Docker Compose, REST APIs, CI/CD practices, and cloud-ready deployment architecture.

Attendance Management System | 2025

GitHub: https://github.com/dineshgadiraju/AMS

• Developed a secure attendance management platform using Python, OpenCV, MongoDB, HTML, CSS, JavaScript, and Flask, implementing face recognition, authentication, and role-based access control.

• Built a computer vision pipeline using Python and OpenCV, achieving 94% facial recognition accuracy under varying classroom lighting conditions while preventing proxy attendance.
• Leveraged MongoDB and modern web technologies for seamless data storage and efficient querying, reducing administrative manual tracking efforts by over 80%.
• Implemented authentication, authorization, and secure database operations while improving overall application reliability and scalability.

Credit Card Fraud Detection Using Ensemble Learning | 2025
• Developed an end-to-end machine learning fraud detection pipeline using Python, Scikit-learn, XGBoost, Random Forest, Logistic Regression, and Neural Networks.
• Handled extreme class imbalance (fraud < 0.2% of dataset) by applying advanced oversampling techniques including SMOTE, ADASYN, and SVMSMOTE.
• Achieved 95% precision and 88% recall while minimizing false positives through feature engineering, hyperparameter tuning, and ensemble learning.
• Improved fraud detection performance while maintaining low false-positive rates across highly imbalanced transaction datasets.

SKILLS

Programming Languages: Python, Java, JavaScript (ES6+), Golang, TypeScript, SQL
Frameworks & Libraries: Go Gin, React.js, Next.js, Tailwind CSS, Spring Boot, Spring MVC, Node.js, Pandas, NumPy, Scikit-learn, OpenCV
Cloud & DevOps: AWS (EC2, S3, IAM), Docker, Docker Compose, GitHub Actions, Git, CI/CD, Vercel
Databases: PostgreSQL, Redis, MongoDB, MySQL, Oracle SQL
AI / ML: OpenAI API, Prompt Engineering, LLM Applications, XGBoost, Random Forest, Logistic Regression, Neural Networks, SMOTE, ADASYN, Ensemble Learning
Tools & Methodologies: GitHub, VS Code, IntelliJ IDEA, Postman, Jira, Agile/Scrum, SDLC, RESTful APIs, Unit Testing
